Important

This document is not an official Census Bureau publication. It is compiled from publicly accessible information by Lars Vilhuber ([Labor Dynamics Institute, Cornell University](#)). Feedback is welcome. Please write us at lars.vilhuber@cornell.edu.

1 Purpose

The public-use data from the Longitudinal Employer-Household Dynamics Program, including the Quarterly Workforce Indicators (QWI) and Job-to-Job Flows (J2J), are available for download with the following data schema. These data are available as Comma-Separated Value (CSV) files through the LEHD website's Data page at <http://lehd.ces.census.gov/data/> and through LED Extraction Tool at <http://ledextract.ces.census.gov/>.

This document describes the file naming schema for LEHD-provided CSV files.

2 Schema for Data File Contents

The contents (schema) for LEHD data files are described in [lehd_public_use_schema.pdf](#). The contents (schema) for shapefiles are described in [lehd_shapefiles.pdf](#).

3 Extends

This version reimplements some features from V4.0. Many files compliant with LEHD or QWI Schema v4.0 will also be compliant with this schema, but compatibility is not guaranteed.

4 Supersedes

This version supersedes V4.1.0, for files released as of R2016Q4

5 Basic Schema

All files are preceded by a file type definition, followed by additional information on the aggregation level of the file, or some other identifier.

[TYPE]_[DETAILS].[EXT]

([naming_convention.csv](#))

type	Used By	Description
[type]_[id]	qwix	CSV files queried from the LED Extraction Tool at http://ledextract.ces.census.gov/ .
[type]_[geohi]_[demo]_[fwi]_[geo]_[j2j]_[j2jod]_[geo]_[sa]	lehd_public_use_schema	General naming convention for currently provided files.
lehd_shp_[geo]	shapefiles	ZIP files containing data for shapefiles
version_[demo]_[fwi]_[geo]	lehd_fas_text	Machine-readable text files with metadata on geographic and temporal coverage for QWI
version\[type]_[geo]	metadata	Machine-readable text files with metadata on geographic and temporal coverage for J2J
j2jod_[geo]	phydata.csv	Complex metadata (used only in J2JOD) - see below

5.1 QWIPU from the LED Extraction Tool

Files downloaded through the LED Extraction Tool at <http://ledextract.ces.census.gov/> follow the following naming convention:

```
[type]_[id].[EXT]
```

where [id] is the Request ID (a unique string of characters) generated every time Submit Request” is clicked. The ID references each query submission made to the database.

5.2 Metadata for QWI data files (version.txt)

Metadata accompanies the data files, identifying provenance, geographic and temporal coverage. These files follow the following naming convention:

```
version_[demo]_[fas].txt
```

where each name component is described in more detail [below](#).

5.3 Metadata for J2J data files (version.txt)

Metadata accompanies the data files, identifying provenance, geographic and temporal coverage. These files follow the following naming convention:

```
version_[type].txt
```

where each name component is described in more detail [below](#).

5.4 Metadata for J2JOD files

Because the origin-destination (J2JOD) data link two regions, we provide an auxiliary file with the time range for which cells containing data for each geographic pairing may appear in a data release. The reference region will always be either the origin or the destination. These files follow the following naming convention:

```
j2jod_[geography]_avail.csv
```

where each name component is described in more detail [below](#).
