---

( [Printable version](#) )

**Important**

This document is not an official Census Bureau publication. It is compiled from publicly accessible information by Lars Vilhuber ([Labor Dynamics Institute, Cornell University](#)). Feedback is welcome. Please write us at [lars.vilhuber@cornell.edu](mailto:lars.vilhuber@cornell.edu).

## 1 Purpose

The public-use data from the Longitudinal Employer-Household Dynamics Program, including the Quarterly Workforce Indicators (QWI) and Job-to-Job Flows (J2J), are available for download with the following data schema. These data are available through the LEHD website's Data page at <http://lehd.ces.census.gov/data/> and through the LED Extraction Tool at <http://ledextract.ces.census.gov/>.

This document describes the data schema for LEHD files. LEHD-provided SHP files are separately described in [lehd\\_shapefiles.pdf](#). For each variable, a set of allowable values is defined. Definitions are provided as CSV files, with header variable definitions. Changes relative to the original v4.0 version are listed [at the end](#).

## 2 File naming

The naming conventions of the data files is documented in [lehd\\_csv\\_naming.pdf](#).

## 3 Extends

This version reimplements some features from V4.0. Many files compliant with LEHD or QWI Schema v4.0 will also be compliant with this schema, but compatibility is not guaranteed.

## 4 Supersedes

This version supersedes V4.1.0, for files released as of R2017Q1.

## 5 Basic Schema

Each data file is structured as a CSV file. The first columns contain [\[identifiers\]](#), subsequent columns contain [\[indicators\]](#), followed by [status flags](#). In some cases, visually formatted Excel (XLSX) files are also available, containing the same information together with header lines on each sheet.

### 5.1 Generic structure

| Column name     |
|-----------------|
| [ Identifier1 ] |
| [ Identifier2 ] |
| [ Identifier3 ] |
| [ ... ]         |
| [ Indicator 1 ] |
| [ Indicator 2 ] |

| Column name       |
|-------------------|
| [ Indicator 3 ]   |
| [ ... ]           |
| [ Status Flag 1 ] |
| [ Status Flag 2 ] |
| [ Status Flag 3 ] |
| [ ... ]           |

Note: A full list of indicators for each type of file are shown below in the [Indicators](#) section. While all indicators are included in the CSV files, only the requested indicators will be included in data outputs from the LED Extraction Tool.

## 5.2 Identifiers

Records, unless otherwise noted, are parts of time-series data. Unique record identifiers are noted below, by file type. Identifiers without the year and quarter component can be considered a series identifier.

### 5.2.1 Mapping for Identifiers

( [lehd\\_mapping\\_identifiers.csv](#) )

Each of the released files has a set of variables uniquely identifying records (*Identifiers*). The table below relates the set of identifier specifications to the released files. The actual CSV files containing the identifiers for each set are listed after this table. Each identifier can take on a specified list of values, documented in the section on [Categorical Variables](#).

| identifiers            | QWI | NQWI | J2J | J2JR | J2JOD | LODES |
|------------------------|-----|------|-----|------|-------|-------|
| lehd_identifiers_qwi   | 1   | 1    |     |      |       |       |
| lehd_identifiers_j2j   |     |      | 1   | 1    |       |       |
| lehd_identifiers_j2jod |     |      |     |      | 1     |       |

### 5.2.2 Identifiers for j2j

( lehd\_identifiers\_j2j.csv )

| Variable    | Type    | label                                  |
|-------------|---------|--|
| periodicity | Char(1) | Periodicity of report                  |
| seasonadj   | Char(1) | Seasonal Adjustment Indicator          |
| geo_level   | Char(1) | Group: Geographic level of aggregation |
| geography   | Char(8) | Group: Geography code                  |
| ind_level   | Char(1) | Group: Industry level of aggregation   |
| industry    | Char(5) | Group: Industry code                   |
| ownercode   | Char(3) | Group: Ownership group code            |
| sex         | Char(1) | Group: Gender code                     |
| agegrp      | Char(3) | Group: Age group code (WIA)            |
| race        | Char(2) | Group: race                            |
| ethnicity   | Char(2) | Group: ethnicity                       |
| education   | Char(2) | Group: education                       |
| firmage     | Char(1) | Group: Firm Age group                  |
| firmsize    | Char(1) | Group: Firm Size group                 |
| year        | Num     | Time: Year                             |
| quarter     | Num     | Time: Quarter                          |
| agg_level   | Num     | Aggregation Level Indicator            |

### 5.2.3 Identifiers for j2jod

( [lehd\\_identifiers\\_j2jod.csv](#) )

| Variable       | Type    | label   |
|----------------|---------|---|
| periodicity    | Char(1) | Periodicity of report                                     |
| seasonadj      | Char(1) | Seasonal Adjustment Indicator                             |
| geo_level      | Char(1) | Group: Geographic level of aggregation of destination job |
| geography      | Char(8) | Group: Geography code of destination job                  |
| ind_level      | Char(1) | Group: Industry level of aggregation of destination job   |
| industry       | Char(5) | Group: Industry code of destination job                   |
| ownercode      | Char(3) | Group: Ownership group code of destination job            |
| sex            | Char(1) | Group: Gender code  |
| agegrp         | Char(3) | Group: Age group code (WIA)                               |
| race           | Char(2) | Group: race   |
| ethnicity      | Char(2) | Group: ethnicity  |
| education      | Char(2) | Group: education  |
| firmage        | Char(1) | Group: Firm Age group                                     |
| firmsize       | Char(1) | Group: Firm Size group                                    |
| year           | Num     | Time: Year  |
| quarter        | Num     | Time: Quarter   |
| agg_level      | Num     | Aggregation Level Indicator                               |
| geo_level_orig | Char(1) | Group: Geographic level of aggregation of origin job      |
| geography_orig | Char(8) | Group: Geography code of origin job                       |
| ind_level_orig | Char(1) | Group: Industry level of aggregation of origin job        |
| industry_orig  | Char(5) | Group: Industry code of origin job                        |
| ownercode_orig | Char(3) | Group: Ownership group code of origin job                 |
| firmage_orig   | Char(1) | Group: Firm Age group of origin job                       |
| firmsize_orig  | Char(1) | Group: Firm Size group of origin job                      |

#### 5.2.4 Identifiers for qwi

( [lehd\\_identifiers\\_qwi.csv](#) )

| Variable    | Type    | label                                  |
|-------------|---------|--|
| periodicity | Char(1) | Periodicity of report                  |
| seasonadj   | Char(1) | Seasonal Adjustment Indicator          |
| geo_level   | Char(1) | Group: Geographic level of aggregation |
| geography   | Char(8) | Group: Geography code                  |
| ind_level   | Char(1) | Group: Industry level of aggregation   |
| industry    | Char(5) | Group: Industry code                   |
| ownercode   | Char(3) | Group: Ownership group code            |
| sex         | Char(1) | Group: Gender code                     |
| agegrp      | Char(3) | Group: Age group code (WIA)            |
| race        | Char(2) | Group: race                            |
| ethnicity   | Char(2) | Group: ethnicity                       |
| education   | Char(2) | Group: education                       |
| firmage     | Char(1) | Group: Firm Age group                  |
| firmsize    | Char(1) | Group: Firm Size group                 |
| year        | Num     | Time: Year                             |
| quarter     | Num     | Time: Quarter                          |

### 5.3 Indicators

The following tables and associated mapping files list the indicators available on each file. The descriptor files themselves are structured as follows:

- The '*Indicator Variable*' is the short name of the variable on the CSV files, suitable for machine processing in a wide variety of statistical applications.
- When given, the '*Alternate name*' may appear in related documentation and articles.
- The '*Status Flag*' is used to indicate publication or data quality status (see [Status Flags](#)).
- The '*Indicator Name*' is a non-abbreviated version of the '*Indicator Variable*'.
- The '*Description*' provides more verbose description of the variable.
- '*Units*' identify the type of variable according to a very simplified taxonomy (not formalized yet): counts, rates, monetary amounts.
- '*Concept*' classifies the variables into higher-level concepts. The taxonomy for these concepts has not been finalized yet, see [label\\_concept\\_draft.csv](#) for a draft version.
- The '*Base*' indicates the denominator used to compute the statistic, and may be 1.

#### 5.3.1 National QWI and state-level QWI (QWIPU)

( [variables\\_qwi.csv](#) )

| Indicator Variable | Alternate Name | Status Flag | Indicator Name                                  | Description   | Units | Concept    | Base |
|--------------------|----------------|-------------|---|---|-------|------------|------|
| Emp                | B              | sEmp        | Beginning-of-Quarter Employment                 | Estimate of the total number of jobs on the first day of the reference quarter  | Count | Employment | 1    |
| EmpEnd             | E              | sEmpEnd     | End-of-Quarter Employment                       | Estimate of the number of jobs on the last day of the quarter   | Count | Employment | 1    |
| EmpS               | F              | sEmpS       | Full-Quarter Employment (Stable)                | Estimate of stable jobs - the number of jobs that are held on both the first and last day of the quarter with the same employer | Count | Employment | 1    |
| EmpTotal           | M              | sEmpTotal   | Employment - Reference Quarter                  | Estimated count of people employed in a firm at any time during the quarter   | Count | Employment | 1    |
| EmpSpv             | Fpv            | sEmpSpv     | Full-Quarter Employment in the Previous Quarter | Estimate of stable jobs in the quarter before the reference quarter   | Count | Employment | 1    |
| HirA               | A              | sHirA       | Hires (All Accessions)                          | Estimated number of workers who started a new job in the specified quarter  | Count | Hire       | 1    |

| Indicator Variable | Alternate Name | Status Flag       | Indicator Name                                 | Description   | Units | Concept    | Base                             |
|--------------------|----------------|-------------------|--|---|-------|------------|----------------------------------|
| HirN               | H              | sHirN             | New Hires                                      | Estimated number of workers who started a new job excluding recall hires                                      | Count | Hire       | 1                                |
| HirR               | R              | sHirR             | Recall Hires                                   | Estimated number of workers who returned to the same employer where they had worked within the previous year  | Count | Hire       | 1                                |
| Sep                | S              | sSep              | Separations (All)                              | Estimated number of workers whose job with a given employer ended in the specified quarter                    | Count | Separation | 1                                |
| HirAEnd            | CA             | sHirAEnd          | End-of-Quarter Hires                           | Estimated number of workers who started a new job in the specified quarter, which continued into next quarter | Count | Hire       | 1                                |
| SepBeg             | CS             | sSepBeg           | Beginning-of-Quarter Separations               | Estimated number of workers whose job in the previous quarter continued and ended in the given quarter        | Count | Separation | 1                                |
| HirAEndRepl EI     |                | sHirAEndRepl EI   | Replacement Hires                              | Hires into continuous quarter employment in excess of job creation  | Count | Hire       | 1                                |
| HirAEndR CAR       |                | sHirAEndR CAR     | End-of-Quarter Hiring Rate                     | Hires as a percent of average employment  | Rate  | Hire       | $(\text{Emp} + \text{EmpEnd})/2$ |

## 5.4 Variability measures

The following tables and associated mapping files list the variability measures available on each file. The '*Variability Measure*' is the short name of the variable on the CSV files, suitable for machine processing in a wide variety of statistical applications. When given, the '*Alternate Name*' may appear in related documentation and articles. The '*Variable Name*' is a more verbose description of the variability measure.

Six variability measures are published:

- Total variability, prefixed by vt\_
- Standard error, prefixed by st\_, and computed as the square root of Total Variability
- Between-implicate variability, prefixed by vb\_
- Average within-implicate variability, prefixed by vw\_
- Degrees of freedom, prefixed by df\_
- Missingness ratio, prefixed by mr\_

A missing variability measure indicates a structural zero in the corresponding indicator. This is currently not associated with a flag.

### 5.4.1 Generic structure

| Column name  |
|--|
| [ Identifier1 ]  |
| [ Identifier2 ]  |
| [ Identifier3 ]  |
| [ ... ]  |
| [ Standard error for Indicator 1 ]                       |
| [ Standard error for Indicator 2 ]                       |
| [ Standard error for Indicator 3 ]                       |
| [ ... ]  |
| [ Total variation for Indicator 1 ]                      |
| [ Total variation for Indicator 2 ]                      |
| [ Total variation for Indicator 3 ]                      |
| [ ... ]  |
| [ Between-implicate variability for Indicator 1 ]        |
| [ Between-implicate variability for Indicator 2 ]        |
| [ Between-implicate variability for Indicator 3 ]        |
| [ ... ]  |
| [ Average within-implicate variability for Indicator 1 ] |
| [ Average within-implicate variability for Indicator 2 ] |
| [ Average within-implicate variability for Indicator 3 ] |
| [ ... ]  |
| [ Degrees of freedom for Indicator 1 ]                   |
| [ Degrees of freedom for Indicator 2 ]                   |

| Column name                            |
|--|
| [ Degrees of freedom for Indicator 3 ] |
| [ ... ]                                |
| [ Missingness ratio for Indicator 1 ]  |
| [ Missingness ratio for Indicator 2 ]  |
| [ Missingness ratio for Indicator 3 ]  |
| [ ... ]                                |

Note: A full list of indicators for each type of file are shown in the [Indicators](#) section. In the tables below, only a sample of variability measures are printed, but the complete list is available in the linked CSV schema files.

## 5.4.2 National QWI and state-level QWI

( variables\_qwiv.csv )

| Variability measure | Alternate name | Variable name  | Units | Base |
|---------------------|----------------|--|-------|------|
| st_Emp              | st_B           | Standard error of Beginning-of-Quarter Employment                  | Count | 1    |
| st_EmpEnd           | st_E           | Standard error of End-of-Quarter Employment                        | Count | 1    |
| st_EmpS             | st_F           | Standard error of Full-Quarter Employment (Stable)                 | Count | 1    |
| ...                 |                |  |       |      |
| vt_Emp              | vt_B           | Total variation of Beginning-of-Quarter Employment                 | Count | 1    |
| vt_EmpEnd           | vt_E           | Total variation of End-of-Quarter Employment                       | Count | 1    |
| vt_EmpS             | vt_F           | Total variation of Full-Quarter Employment (Stable)                | Count | 1    |
| ...                 |                |  |       |      |
| vb_Emp              | vb_B           | Between-implicate variability for Beginning-of-Quarter Employment  | Count | 1    |
| vb_EmpEnd           | vb_E           | Between-implicate variability for End-of-Quarter Employment        | Count | 1    |
| vb_EmpS             | vb_F           | Between-implicate variability for Full-Quarter Employment (Stable) | Count | 1    |
| ...                 |                |  |       |      |
| ...                 |                |  |       |      |
| df_Emp              | df_B           | Degrees of freedom for VT of Beginning-of-Quarter Employment       | Count | 1    |
| df_EmpEnd           | df_E           | Degrees of freedom for VT of End-of-Quarter Employment             | Count | 1    |
| df_EmpS             | df_F           | Degrees of freedom for VT of Full-Quarter Employment (Stable)      | Count | 1    |
| ...                 |                |  |       |      |
| mr_Emp              | mr_B           | Missingness ratio for Beginning-of-Quarter Employment              | Count | 1    |
| mr_EmpEnd           | mr_E           | Missingness ratio for End-of-Quarter Employment                    | Count | 1    |
| mr_EmpS             | mr_F           | Missingness ratio for Full-Quarter Employment (Stable)             | Count | 1    |

### 5.4.3 National QWI and state-level QWI rates

( [variables\\_qwirv.csv](#) )

| Variability measure | Alternate name | Variable name  | Units | Base |
|---------------------|----------------|--|-------|------|
| st_HirAR            | st_AR          | Standard error of Hiring Rate (All Accessions)                 | Rate  | 1    |
| st_HirNR            | st_HR          | Standard error of New Hiring Rate                              | Rate  | 1    |
| st_HirRR            | st_RR          | Standard error of Recall Rate                                  | Rate  | 1    |
| ...                 |                |  |       |      |
| vt_HirAR            | vt_AR          | Total variation of Hiring Rate (All Accessions)                | Rate  | 1    |
| vt_HirNR            | vt_HR          | Total variation of New Hiring Rate                             | Rate  | 1    |
| vt_HirRR            | vt_RR          | Total variation of Recall Rate                                 | Rate  | 1    |
| ...                 |                |  |       |      |
| vb_HirAR            | vb_AR          | Between-implicate variability for Hiring Rate (All Accessions) | Rate  | 1    |

## 6 Categorical Variables

Categorical variable descriptions are displayed above each table, with the variable name shown in parentheses. Unless otherwise stated, every possible value/label combination for each categorical variable is listed. Please note that not all values will be available in every table.

### 6.1 agegrp

( [label\\_agegrp.csv](#) )

| agegrp | label            |
|--------|------------------|
| A00    | All Ages (14-99) |
| A01    | 14-18            |
| A02    | 19-21            |
| A03    | 22-24            |
| A04    | 25-34            |
| A05    | 35-44            |
| A06    | 45-54            |
| A07    | 55-64            |
| A08    | 65-99            |

### 6.2 education

( [label\\_education.csv](#) )

| education | label   |
|-----------|---|
| E0        | All Education Categories  |
| E1        | Less than high school   |
| E2        | High school or equivalent, no college                             |
| E3        | Some college or Associate degree                                  |
| E4        | Bachelor's degree or advanced degree                              |
| E5        | Educational attainment not available (workers aged 24 or younger) |

### 6.3 ethnicity

( [label\\_ethnicity.csv](#) )

| ethnicity | label                  |
|-----------|------------------------|
| A0        | All Ethnicities        |
| A1        | Not Hispanic or Latino |
| A2        | Hispanic or Latino     |

### 6.4 firmage

( [label\\_firmage.csv](#) )

| firmage | label         |
|---------|---------------|
| 0       | All Firm Ages |
| 1       | 0-1 Years     |
| 2       | 2-3 Years     |
| 3       | 4-5 Years     |

| <b>firmage</b> | <b>label</b>                                   |
|----------------|--|
| 4              | 6-10 Years                                     |
| 5              | 11+ Years                                      |
| N              | Firm Age Not Available For Public-Sector Firms |

## 6.5 firmsize

( [label\\_firmsize.csv](#) )

| <b>firmsize</b> | <b>label</b>                                    |
|-----------------|---|
| 0               | All Firm Sizes                                  |
| 1               | 0-19 Employees                                  |
| 2               | 20-49 Employees                                 |
| 3               | 50-249 Employees                                |
| 4               | 250-499 Employees                               |
| 5               | 500+ Employees                                  |
| N               | Firm Size Not Available For Public-Sector Firms |

## 6.6 ownercode

( [label\\_ownercode.csv](#) )

| <b>ownercode</b> | <b>label</b>                                      |
|------------------|---|
| A00              | State and local government plus private ownership |
| A01              | Federal government                                |
| A05              | All Private                                       |

## 6.7 periodicity

( [label\\_periodicity.csv](#) )

| <b>periodicity</b> | <b>label</b>   |
|--------------------|----------------|
| A                  | Annual data    |
| Q                  | Quarterly data |

## 6.8 quarter

( [label\\_quarter.csv](#) )

| <b>quarter</b> | <b>label</b>                               |
|----------------|--|
| 1              | 1st Quarter of the Year (January-March)    |
| 2              | 2nd Quarter of the Year (April-June)       |
| 3              | 3rd Quarter of the Year (July-September)   |
| 4              | 4th Quarter of the Year (October-December) |

## 6.9 race

( [label\\_race.csv](#) )

| <b>race</b> | <b>label</b> |
|-------------|--------------|
| A0          | All Races    |

| <b>race</b> | <b>label</b>                                    |
|-------------|---|
| A1          | White Alone                                     |
| A2          | Black or African American Alone                 |
| A3          | American Indian or Alaska Native Alone          |
| A4          | Asian Alone                                     |
| A5          | Native Hawaiian or Other Pacific Islander Alone |
| A6          | Some Other Race Alone (Not Used)                |
| A7          | Two or More Race Groups                         |

## 6.10 seasonadj

( [label\\_seasonadj.csv](#) )

| <b>seasonadj</b> | <b>label</b>            |
|------------------|-------------------------|
| S                | Seasonally adjusted     |

## 6.12 Industry

### 6.12.1 Industry levels

( [label\\_ind\\_level.csv](#) )

| ind_level | label                 |
|-----------|-----------------------|
| A         | All Industries        |
| S         | NAICS Sectors         |
| 3         | NAICS Subsectors      |
| 4         | NAICS Industry Groups |

### 6.12.2 Industry

( [label\\_industry.csv](#) )

Only a small subset of available values shown. The 2017 NAICS (North American Industry Classification System) is used for all years. QWI releases prior to R2018Q1 used the 2012 NAICS classification (see [Schema v4.1.3](#)). For a full listing of all valid 2017 NAICS codes, see <http://www.census.gov/cgi-bin/sssd/naics/naicsrch?chart=2017>.

| industry | label   | ind_level |
|----------|---|-----------|
| 00       | All NAICS Sectors                             | A         |
| 000      | All NAICS Subsectors                          | A         |
| 0000     | All NAICS Industry Groups                     | A         |

| ...      |   |           |

## 6.13 Geography

### 6.13.1 Geographic levels

Geography labels for data files are provided in separate files, by scope. Each file *label\_geography\_SCOPE.csv* may contain one or more types of records as flagged by *geo\_level*. For convenience, a composite file containing all geocodes is available as *label\_geography.csv*. The 2017 vintage of **Census TIGER/Line geography** is used for all tabulations as of the R2018Q1 release.

Shapefiles are described in a [separate document](#).

( *label\_geo\_level.csv* )

| <b>geo_level</b> | <b>label</b>                           | <b>description</b>  | <b>sourceurl</b>  |
|------------------|--|---|---|
| B                | Metropolitan (complete)                | Identifies 5-digit CBSA code for metropolitan areas provided by the Census Bureau's Geography Division. Balance of state including micropolitan areas are identified by custom codes as [ST]999 | <a href="http://www.census.gov/population/metro/">http://www.census.gov/population/metro/</a>                                       |
| C                | Counties                               | Identifies 5-digit FIPS/ANSI code for counties  | <a href="https://www.census.gov/geo/reference/codes/cou.html">https://www.census.gov/geo/reference/codes/cou.html</a>               |
| M                | Metropolitan/Micropolitan (state part) | Identifies 7-digit code constructed from the 2-digit state FIPS code and the 5-digit CBSA code provided by the Census Bureau's Geography Division   | <a href="http://www.census.gov/population/metro/">http://www.census.gov/population/metro/</a>                                       |
| N                | National (50 States + DC)              | Custom code using 00 to denote national scope   |   |
| S                | States                                 | Identifies 2-digit FIPS/ANSI codes  | <a href="https://www.census.gov/geo/reference/ansi_statetables.html">https://www.census.gov/geo/reference/ansi_statetables.html</a> |
| W                | Workforce Investment Areas             | 2-digit state FIPS code and the 6-digit WIA identifier provided by LED State Partners   |   |

### 6.13.2 National and state-level values

( *label\_fipsnum.csv* )

The file *label\_fipsnum.csv* contains values and labels for all entities of *geo\_level* N or S, and is a summary of separately available files.

| <b>geography</b> | <b>label</b>              | <b>geo_level</b> |
|------------------|---------------------------|------------------|
| 00               | National (50 States + DC) | N                |
| 01               | Alabama                   | S                |
| 02               | Alaska                    | S                |
| 04               | Arizona                   | S                |
| 05               | Arkansas                  | S                |
| 06               | California                | S                |
| 08               | Colorado                  | S                |
| ...              |                           |                  |
| 45               | South Carolina            | S                |
| 46               | South Dakota              | S                |
| 47               | Tennessee                 | S                |
| 48               | Texas                     | S                |
| 49               | Utah                      | S                |

| geography | label      | geo_level |
|-----------|------------|-----------|
| 50        | Vermont    | S         |
| 51        | Virginia   | S         |
| 53        | Washington | S         |

### 6.13.3 State postal codes

Some parts of the schema use (lower or upper-case) state postal codes.

( [label\\_stusps.csv](#) )

| geography | stusps |
|-----------|--------|
| 00        | US     |

#### 6.13.4 Detailed state and substate level values

Files of type *label\_geography\_[ST].csv* will contain identifiers and labels for geographic areas entirely comprised within a given state *[ST]*. State-specific parts of cross-state CBSA, in records of type *geo\_level* = M, are present on files of type *label\_geography\_[ST].csv*. The file *label\_geography\_metro.csv* contains labels for records of type *geo\_level* = B, for metropolitan areas only.

| Scope         | Types   | Format file                               |
|---------------|---------|---|
| US            | N       | <a href="#">label_geography_us.csv</a>    |

## 6.14 Aggregation level

( [label\\_agg\\_level.csv](#) )

Measures within the J2J and QWI data products are tabulated on many different dimensions, including demographic characteristics, geography, industry, and other firm characteristics. For Origin-Destination (O-D) tables, characteristics of the origin and destination firm can be tabulated separately. Every tabulation level is assigned a unique aggregation index, represented by the `agg_level` variable. This index starts from 1, representing a national level grand total (all industries, workers, etc.), and progresses through different combinations of characteristics. There are gaps in the progression to leave space for aggregation levels that may be included in future data releases.

`agg_level` is currently reported only for J2J data products.

The following variables are included in the [label\\_agg\\_level.csv](#) file:

| Variable                    | Description   |
|-----------------------------|---|
| <code>agg_level</code>      | index representing level of aggregation reported on a given record  |
| <code>worker_char</code>    | demographic (worker) characteristics reported on record   |
| <code>firm_char</code>      | firm characteristics reported on record. These will be the characteristics of the destination firm in O-D tabulations |
| <code>firm_orig_char</code> | characteristics of origin firm reported on record (O-D tabulations only)  |
| <code>j2j</code>            | Flag: Aggregation level available on J2J counts tables  |
| <code>j2jr</code>           | Flag: Aggregation level available on J2J rates tables   |
| <code>j2jod</code>          | Flag: Aggregation level available on J2J O-D tables   |
| <code>qwi</code>            | Flag: Aggregation level available on QWI  |

The characteristics available on an aggregation level are repeated using a series of flags following the standard schema:

- [geo\\_level](#) - geographic level of table
- [ind\\_level](#) - industry level of table
- `by_` variables - flags indicating other dimensions reported, including ownership, demographics, firm age and size.

A shortened representation of the file is provided below, the complete file is available in the link above.

| <code>agg_level</code> | <code>worker_char</code> | <code>firm_char</code> | <code>firm_orig_char</code> | <code>j2j</code> | <code>j2jr</code> | <code>j2jod</code> | <code>qwi</code> | <code>geo_level</code> |
|------------------------|--------------------------|------------------------|-----------------------------|------------------|-------------------|--------------------|------------------|------------------------|
| 1                      |                          |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| 2                      | Sex                      |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| 3                      | Age                      |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| 4                      | Sex * Age                |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| 5                      | Race                     |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| 9                      | Ethnicity                |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| 13                     | Race * Ethnicity         |                        |                             | 1                | 1                 | 1                  | 0                | N                      |
| ...                    |                          |                        |                             |                  |                   |                    |                  |                        |
| 129                    |                          | Firm Size              |                             | 1                | 1                 | 1                  | 0                | N                      |
| 257                    |                          | NAICS Sector           |                             | 1                | 1                 | 1                  | 0                | N                      |
| 258                    | Sex                      | NAICS Sector           |                             | 1                | 1                 | 1                  | 0                | N                      |

| agg_level | worker_char         | firm_char | firm_orig_char | j2j | j2jr | j2jod | qwi | geo_level |
|-----------|---------------------|-----------|----------------|-----|------|-------|-----|-----------|
| ...       |                     |           |                |     |      |       |     |           |
| 1029      | Race                | State     |                | 1   | 1    | 1     | 0   | S         |
| 1033      | Ethnicity           | State     |                | 1   | 1    | 1     | 0   | S         |
| 1037      | Race *<br>Ethnicity | State     |                | 1   | 1    | 1     | 0   | S         |
| ...       |                     |           |                |     |      |       |     |           |

## 7 Status Flags

( [label\\_flags.csv](#) )

Each status flag in the tables above contains one of the following valid values. The values and their interpretation are listed in the table below.

**Important**

Note: Currently, the J2J tables only contain status flags -1, 1, 5. Status flags with values 10 or above only appear in online applications, not in CSV files.

| flag | label  |
|------|--|
| -2   | no data available in this category for this quarter  |
| -1   | data not available to compute this estimate  |
| 1    | OK   |
| 5    | Value suppressed because it does not meet US Census Bureau publication standards.                            |
| 6    | Value calculated from other released measures - no significant distortion                                    |
| 7    | Value calculated from other released measures - some of which have significantly distorted data              |
| 9    | Data significantly distorted - fuzzed value released   |
| 10   | Aggregate of cells - no significant distortion   |
| 11   | Aggregate of cells not released because component cells do not meet U.S. Census Bureau publication standards |
| 12   | Aggregate of cells - some of which have significantly distorted data   |

## 8 Metadata

( [variables\\_version.csv](#) )

### 8.1 Version Metadata for QWI and J2J Files (version.txt)

Each data release is accompanied by one or more files with metadata on geographic and temporal coverage, in a compact notation. These files follow the following naming convention:

```
version_[demo]_[fas].txt
version_[type].txt
```

where each component is described in more detail in [lehd\\_csv\\_naming.pdf](#).

The contents contains the following elements:

| Component | Source                      | Description  |
|-----------|-----------------------------|--|
| product   | [type]                      | Type as described in <a href="#">lehd_csv_naming.pdf</a>   |
| demo_fas  | [demo]_[fas]                | (optional - concatenated with product) used for QWI to distinguish separate tabulations from the legal [demo]_[fas] combinations as described in <a href="#">lehd_csv_naming.pdf</a> |
| geo       | [stusps] or METRO           | Covered <a href="#">[geography]</a> (uppercase state postal code including entire nation or the word METRO)  |
| geonum    | <a href="#">[geography]</a> | Numeric geography code   |
| start     | yyyy:q                      | Start year and quarter   |
| end       | yyyy:q                      | End year and quarter   |
| schema    | Vx.y.z                      | Version of the schema  |
| release   | RyyyyQq                     | Release quarter (identifies when the data was created)   |
| internal  | various                     | Internal identifier used for provenance tracking   |

For instance, the metadata for the R2017Q3 release of Missouri QWI Sex by Age tabulations for No firm size or age detail (obtained from [here](#)) has the following content:

```
QWISA_F MO 29 1995:1-2016:4 V4.1.2 R2017Q3 qwipu_mo_20170928_1714
```

Similarly, the metadata for the R2017Q3 release of Missouri J2J tabulations (obtained from [here](#)) has the following content:

```
J2J MO 29 2000:2-2016:3 V4.2b-draft R2017Q3 j2jpu_mo_20171023_1412
```

Some J2J metadata may contain multiple lines, as necessary.

### 8.2 Additional Metadata for J2JOD Files (avail.csv)

( [variables\\_avail.csv](#) )

Because the origin-destination (J2JOD) data link two regions, we provide an auxiliary file with the time range that cells containing data for each geographic pairing may appear in a data release.

| variable       | type    | label                                       |
|----------------|---------|---|
| geo_level      | Char(1) | Geographic level of destination region      |
| geography      | Char(8) | Geography code of destination region        |
| geo_level_orig | Char(1) | Geographic level of origin region           |
| geography_orig | Char(8) | Geography code of origin region             |
| start_year     | Num     | First year regional pair may be observed    |
| start_quarter  | Num     | First quarter regional pair may be observed |
| end_year       | Num     | Last year regional pair may be observed     |
| end_quarter    | Num     | Last quarter regional pair may be observed  |

The reference region will always be either the origin or the destination. National tabulations contain records where both origin and destination are [geo\\_level=N](#); state tabulations contain records where [geo\\_level](#) in (N,S); metro tabulations contain records where [geo\\_level](#) in (N,S,B). Data may be suppressed for certain combinations of regions and quarters because the estimates do not meet Census Bureau publication standards.

### 8.3 Metadata on Indicator Availability

([variables\\_lags.csv](#))

Each [Indicator](#) potentially requires leads and/or lags of data to be computed, and thus may not be available for certain time periods. Only two QWI will be available for all quarters of the time span described by `start` and `end` in the [version.txt](#) files: `EmpTotal` and `Payroll`. The date range for QWI, QWIR, J2J, and J2JR can be found in [version.txt](#); the date range for J2JOD can be found in [avail.csv](#).

For each indicator, the following files contain the quarters of data required to be available relative to the overall date range described in the metadata for the release:

- [lags\\_qwi.csv](#)
- [lags\\_j2j.csv](#)
- [lags\\_j2japp.csv](#)

The files are structured as follows:

| variable                     | type | label  |
|------------------------------|------|--|
| Indicator Variable           | Num  | Name of the Indicator  |
| Quarters_Required_Prior      | Num  | Number of quarters of data required to compute indicator relative to start quarter |
| Quarters_Required_Subsequent | Num  | Number of quarters of data required to compute indicator relative to end quarter   |

## 9 Changes

For a description of how schema files are versioned, see [main directory](#).

### 9.1 This version (revisions)

- 2017-12-15: Initial release

### 9.2 Version 4.2.0 from 4.1.3

- Updated industry classification from NAICS 2012 to NAICS 2017
  - Added J2J Explorer-specific description of metadata for convenience ([lehd\\_j2jexplorer\\_schema.html](#))
  - Added a column `ind_level` to `label_industry.csv` similar to the `geo_level`
  - Added additional columns to the variable metadata schema for greater clarity
    - Description,
    - Concept,
    - Base
  - Added a (draft) taxonomy of concepts used in the LEHD data world ([label\\_concept\\_draft.csv](#))
  - Fixed the labeling of ownership code A00 to correctly reflect scope
  - Added files describing the number of quarters of data availability required relative to start and end quarters ([lags\\_qwi.csv](#) and [lags\\_j2j.csv](#)), and its metadata ([variables\\_lags.csv](#))
-
