## 1 Purpose

This document describes the file naming schema for LEHD-provided CSV files.

## 2 Schema for Data File Contents

## 4 Supersedes

## 5 Basic Schema

[TYPE] [DETAILS].[EXT]

<b>type</b>	<b>Used By</b>	<b>Description</b>
[type]_[id]	qwix	CSV files queried from the LED Extraction Tool at <a href="http://ledextract.ces.census.gov/">http://ledextract.ces.census.gov/</a> .
[type]_[geohi]_[demo]_[fast]_[geo]_[j2j]_[j2jod]_[j2jod_low]_[geo]_[sa]	lehd	A naming convention for currently provided files.
lehd_shp_[geoshapfiles]		ZIP files containing data for shapefiles
version_[demo]_[fast]_[text]		Machine-readable text files with metadata on geographic and temporal coverage for QWI
version\[type]_[meta]		Machine-readable text files with metadata on geographic and temporal coverage for J2J
j2jod_[geography]_[detail].csv		Complex metadata (used only in J2JOD) - see below

### 5.1 QWIPU from the LED Extraction Tool

Files downloaded through the LED Extraction Tool at <http://ledextract.ces.census.gov/> follow the following naming convention:

```
[type]_[id].[EXT]
```

where [id] is the Request ID (a unique string of characters) generated every time Submit Request” is clicked. The ID references each query submission made to the database.

## 5.2 Metadata for QWI data files (version.txt)

Metadata accompanies the data files, identifying provenance, geographic and temporal coverage. These files follow the following naming convention:

```
version_[demo]_[fas].txt
```

where each name component is described in more detail [below](#).

## 5.3 Metadata for J2J data files (version.txt)

Metadata accompanies the data files, identifying provenance, geographic and temporal coverage. These files follow the following naming convention:

```
version_[type].txt
```

where each name component is described in more detail [below](#).

## 5.4 Metadata for J2JOD files

Because the origin-destination (J2JOD) data link two regions, we provide an auxiliary file with the time range for which cells containing data for each geographic pairing may appear in a data release. The reference region will always be either the origin or the destination. These files follow the following naming convention:

```
j2jod_[geography]_avail.csv
```

where each name component is described in more detail [below](#).

## 6.2 geohi

( [naming\\_geohi.csv](#) )
